

High-Speed Precision Bearings

ROBUST Series

ROBUST Series was developed using NSK's material, evaluation, and analysis technologies to improve the performance of machine tools.

Building on the new technologies of today to meet the requirements of tomorrow

NSK continually develops and provides new products and solutions for customers. In 1998, the ROBUST Series was developed.

During the last JIMTOF 2002,

NSK emphasized the themes of "Environmentally Sound,"

"Easy Handling," and "Economy."

Now the themes for the future are "Fast," "Friendly," "Firm," and "Fine."

NSK contributes to the machine tool industry

by providing new and continuously improved products.

ROBUSTSeries

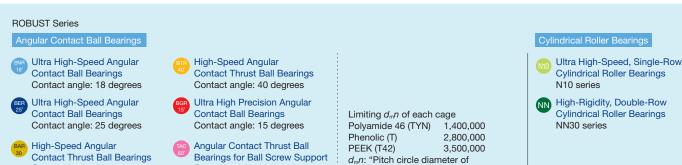

ROBUST Series Continuous Improvement

The ROBUST Series was developed using NSK's material, evaluation, and analysis technologies. These technologies and the ROBUST Series are being continuously improved to deliver the highest quality and performance.

rolling elements (mm) "x" Speed (min-1)"

Contact angle: 60 degrees

Contact angle: 30 degrees

Bearings for ultra high-speed machining centers with oil-air lubrication

Higher speed with silent operation

Spin-Shot II provides spindles with the capability of both silent operation and higher speed under optimised lubrication conditions.

Spin-Shot II can maintain excellent performance even when the conventional air supply is reduced by 1/3.

Ultra High-Speed Angular Contact Ball Bearings

Ultra High-Speed Cylindrical Roller Bearings

Achieved 3.0M d_mn

ROBUST Cylindrical Roller Bearings simplify the structure of the spindle and also achieve 3.0M d_mn : twice the current speed.

Low temperature rise designed for higher speed operation

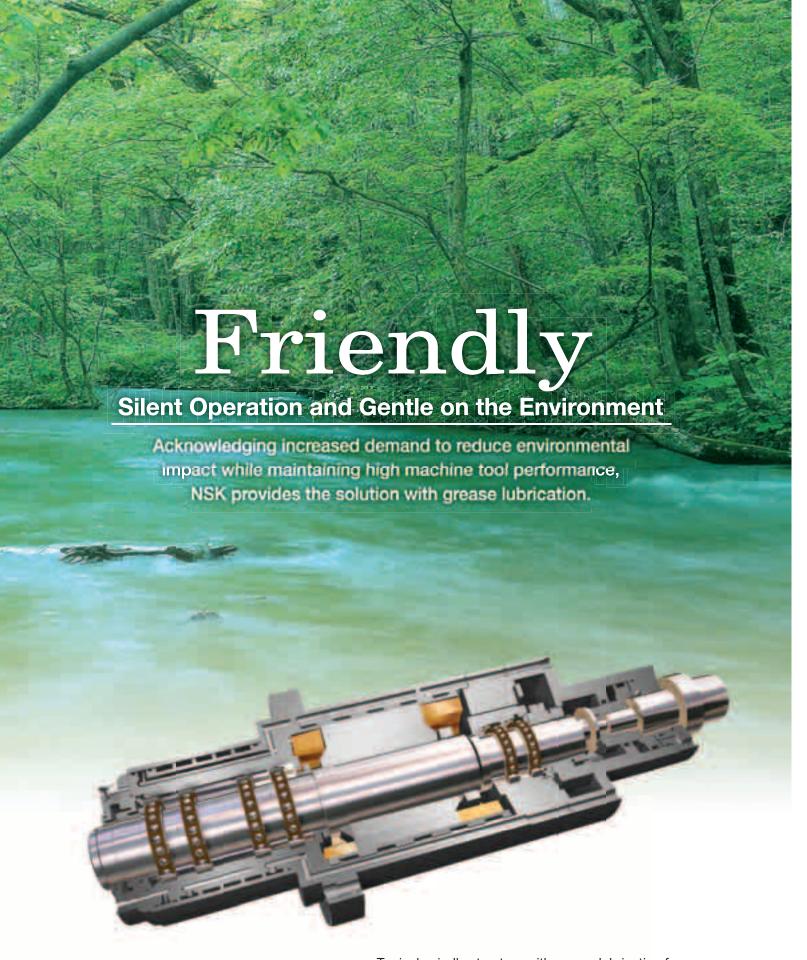

ROBUST Angular Contact Ball Bearings have achieved low temperature rise during high-speed operation through optimised design.

Bearing Selection Guide

Bearing type based on preload method and rotational speed

* Assuming #50 taper—Bearing Bore = 100 mm, #40 taper—Bearing Bore = 70 mm, #30 taper—Bearing Bore = 40 mm

Typical spindle structure with grease lubrication for high-speed machining centers.

Typical application

Molding die machining Automotive parts machining

Bearings for high-speed machining centers with grease lubrication

Grease Replenishing System

This system feeds a small amount of grease to the bearing at regular intervals, enabling

speeds up to 1.8M $d_{m}n$ with position preload. The Grease Replenishing System enables longer grease life, consumes less air, and is quieter relative to an oil-air system.

MTE grease developed by NSK is used in the system. MTS and MTE grease provide the best performance for normal grease lubrication.

NSK Grease MTE: for high-speed and heavy load MTS: for ultra high-speed

High-Speed Angular Contact Ball Bearings (Photo: Angular Contact Ball Bearings with Seal)

Angular Contact Ball Bearings with TYN Cage, suited for grease lubrication; seal enables longer grease life.

TYN cage (ball guided, engineered polymer) suitable for grease lubrication, seal enables longer grease life. Bore dia: 30 mm - 100 mm

High-Speed Cylindrical Roller Bearings (Photo: Z specification)

From NSK—"Low Heat Generation Cylindrical **Roller Bearings**"

By reducing the number of rollers by half (Z spec.), this specification of Cylindrical Roller Bearings is wellsuited for the rear side of a spindle with a built-in motor. This new idea provides longer grease life.

Bearing Selection Guide

Bearing type based on preload method and rotational speed

* Assuming #50 taper—Bearing Bore = 100 mm, #40 taper—Bearing Bore = 70 mm, #30 taper—Bearing Bore = 40 mm

7 NSK NSK 8

High-Speed, High-Rigidity, and High-Accuracy Bearings for Lathes

High speed and high rigidity with long grease life

ROBUST Cylindrical Roller Bearings with TB cage, made with the finest materials and optimised design, are suitable for lathes, and provide highspeed and high rigidity.

E44 symbol: standard oil holes and grooves on O.D.

High-Speed Angular Contact Thrust Ball Bearings

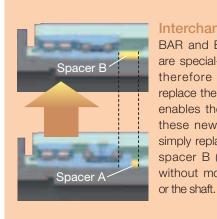

Low heat generation, high rigidity, and high accuracy

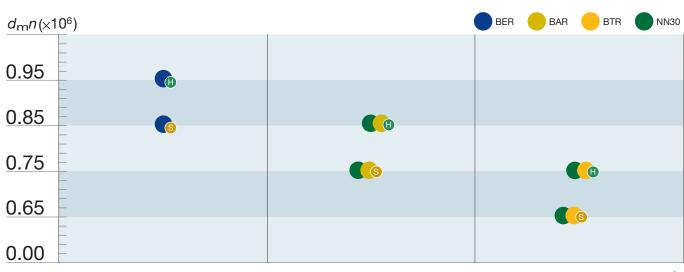

Low heat generation and high rigidity increase the reliability of the spindle.

Interchangeability
BAR and BTR type bearings are special-width designs and therefore can be used to replace the TAC20X type. This enables the customer to use these new-type bearings by simply replacing spacer A with spacer B (see left diagram), without modifying the housing

Bearing Selection Guide

Bearing type based on rotational speed

Rigidity of the main shaft with position preload

Firm

Strength and Long Life

For high rigidity, high reliability, and long life, NSK provides the solution for each application.

Ball Screw Support Bearings

Design optimised to produce high rigidity bearing for special applications

This bearing design has been improved to meet the requirements of this application. Using long life and high reliability material, fatigue life has been extended, and by increasing the number of the balls, the rigidity of this bearing has been increased.

Ball Screw Support Angular Contact Thrust Ball Bearings, with seal

* Different colored seal on each side to identify bearing orientation

Easy handling and increased reliability

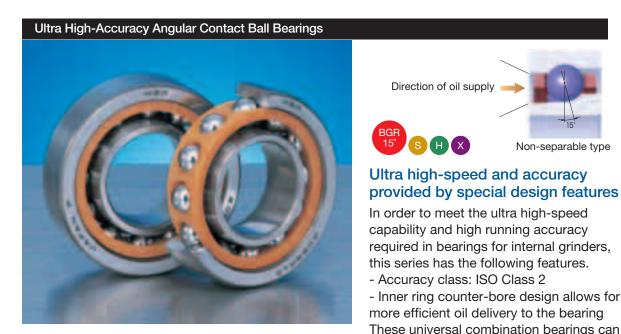

Superior seal design for typical ball screw applications increases the reliability of the bearings and provides for easy handling. Universal combination of this bearing provides extra flexibility.

Fine

High Accuracy

With the finest surface finish, NSK provides the optimal solution, with high running accuracy.

Ultra High-Speed Bearings for Internal Grinders

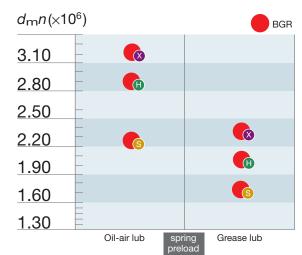

In order to meet the ultra high-speed capability and high running accuracy required in bearings for internal grinders, this series has the following features.

- Accuracy class: ISO Class 2
- Inner ring counter-bore design allows for more efficient oil delivery to the bearing These universal combination bearings can be used in any combination.

Bearing Selection Guide

Bearing type based on lubrication method and rotational speed

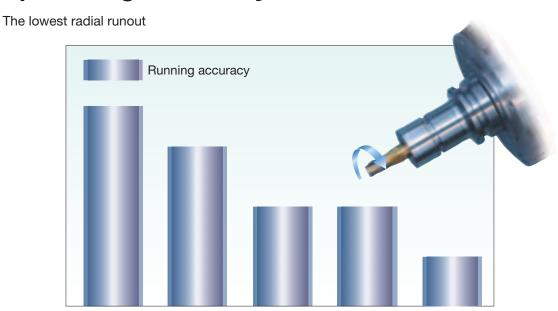

Typical spindle structure for internal grinder
